What is the aim of the open-plan-tool?

The open-plan-tool is used for the techno-economic planning of energy systems (initial design, economic feasibility and potential of technologies).

Municipalities, communities, small and medium-sized enterprises municipa utilities, etc. shall be supported in the transition of their energy systems.

For planning the technical feasibility and implementation of individual components further (commercial) tools may be necessary.

The open-plan-tool serves to initiate new projects for the implementation of the energy transition.

The open-plan-tool can do what the stakeholders want it to do.

Project overview: user-friendly tool development

Zugang zum open-plan-tool

A first **Beta-Version** has been released in October 2021:

<https://open-plan.rl-institut.de/de/>

Contact to the open-plan-tool team

You want to...

- ...participate in the developing of the open-plan-tool?
- ...model one of your energy systems with the open-plan-tool?
- ...get an individual training of the open-plan-tool?

Please contact us via:

E-Mail: open_plan@rl-institut.de
